

How can technology be used to support students learning in the math classes ?

Introduction

The aim of using modern technology tools is to rise the level of education .

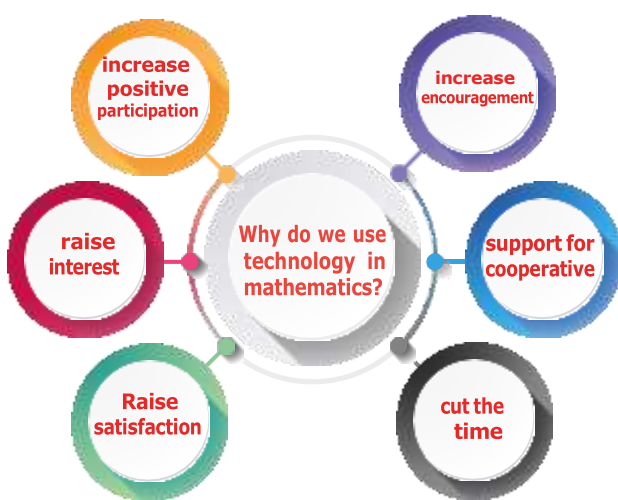

What is the problem

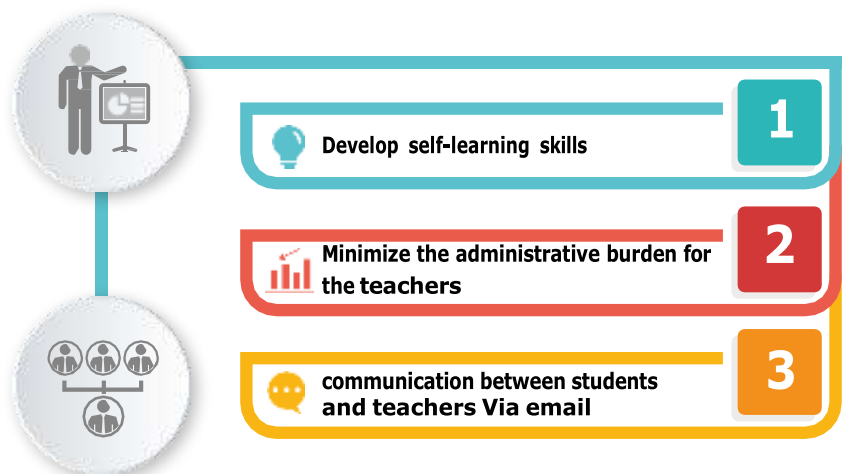

Non-use of technology has led to boredom of students of the material and disengagement .

What I learned in Australia

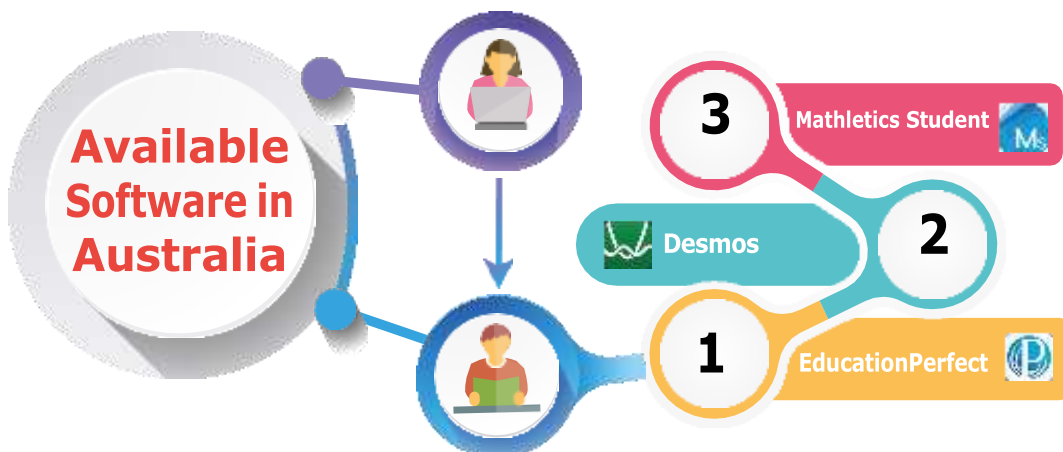

The use of technology in mathematics

connection

Available Software in Australia

How am i going to implement this project in my classroom ?

Providing Internet, smart and computer equipment and training students to use software in technology

Evaluation

1. Survey for students and teachers.
2. Compare post tests with pre test.

Outline project

Aims of my the project

- Raising the level of student achievement
- The student depends on himself

What is the proposed the live for project ?

- two Semesters

General goals by the end of the project :

- Publishing the findings of my projects to all schools located in my city as well as offering some recommendations
